## Introduction

Established in 1993, Elmhurst Energy Systems Ltd offers outstanding certification schemes, high quality training and unrivalled energy rating software covering all strands of the energy assessment industry including the Green Deal.

## Qualification:

A Display Energy Certificate (DEC) Assessor is a certified individual who undertakes energy calculations, using approved Operational Rating (OR) software, on public buildings. The calculations produce a DEC and Advisory Report (AR). All public buildings over 500m<sup>2</sup> that are frequently visited by the public in the UK require a DEC and AR.

## Who Can Apply?

APEL routes are designed for professionals looking to achieve certification that are able to document their involvement and experience in buildings management and/or building energy management for at least two of the last five years.

Elmhurst also offers a New Entrant training course for individuals without prior experience. For more information, [click here](#).

## Application Process

In order to apply for the DEC APEL course, candidates need to complete an application form summarising their knowledge and experience in buildings management. This will be reviewed by our Non Domestic team, who will let candidates know if they qualify for the APEL route, or if they would be more suited to the new entrant route.

Upon successful completion of the DEC training individuals are classed as qualified. Once qualified you are eligible to join our government approved certification scheme free of charge. Only individuals who are registered with an approved certification body are able to produce legally valid DEC's. Free of charge certification is included as part of the DEC APEL route.

## Course Information

We offer a 1 day training course for APEL candidates to qualify as DEC assessors. The ABBE (Awarding Body for the Built Environment) APEL DEC course includes:

- 1 day classroom training

---

# Display Energy Certificate Assessor APEL

---

- 3 DEC test case assessment
- Distance learning materials
